```
cloned, 5' cloning site: Sfi A site GGCCATTMAGGCC;
linker/adaptor sequence: 5.AAGCAGTGGTATCAACGCCAGAGTGGCC;
3' cloning site: Sfi B site GGCCAAGAGGCCC;
linker/adaptor sequence: same as the priming sequence;
linker/adaptor sequence: same as the priming sequence;
Average insert size: 2kb; For PCR insert analysis: Use
M13 Forward and reverse primers; Library complexity: 5x106;
Recombinants (inserts): 98%; Library complexity: 5x106;
Full-length construction (method): SMART, a Clontech
method The pooled tissue RNA was collected and used to
construct full length enriched CDNA library and also
served as template to synthesize complex first strand cDNA
probe. Two high density colony arrays were made from over
l10K cDNA clones and hybridized with the probes. Low
intensity clones were selected as they represented rare
expressed clones. The hybridization intensities for all
clones span from 0 to 1.8 million counts and the low
abundant class ranged from 0 to 13,000."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /clone_lib="GISZF001 ra"

Two high density colony arrays were made from over intensity clones and hybridized with the probes. Low intensity clones were selected as they represented rare expressed clones. The hybridization intensities for all clones span from 0 to 1.8 million counts and the low abundant class ranged from 0 to 13,000."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Conservative

/note="Vector: pT7T3-Pac; Site_1: EcoRI; Site_2: NotI;
normalized cDNA library. first strand synthesis with
NotI-dT(18) primer. cDNAs > 350 bp selected by
chromatography (Bio-Gel A50). double-stranded cDNAs
ligated to EcoRI blunt adapter, digested with NotI, size
selected (> 350 bp) and cloned into pT7T3-Pac vector.
single-stranded plasmids hybridized with cDNA inserts at
low Cot (aprox 5), remaining single-stranded plasmids |
low Cot (aprox 5), remaining single-stranded
                                                                                                                                                                                                                             /clone_lib="A. gomesiana hemocytes library"

) .		200111

The invention relates to a HERG protein having a mutation compared to wild-type HERG, and is useful for developing products for the diagnosis, prevention and treatment of long QT (LQT) syndrome. The products and methods can be used for the diagnosis of subjects with LQT syndrome. They can also be used to screen for drugs for treating or preventing LQT syndrome. The HERG nucleic acids can also be used for gene therapy and HERG peptides can be used for gene therapy and

Claim 7; Page 72; 163pp; English.

New isolated mutant HERG nucleic acids, useful for developing products for the diagnosis, prevention and treatment of long QT syndrome.

WPI; 2000-195319/17.

                        sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, Crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to angioplasty, overproduction of tissue due to cicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, myocardial infarction, chronic heart disease, cardiac congestion or
                                                                                                                                                                                                                                                                                       The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide

                                                                                       The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis,

                  The invention relates to a novel inhibitor of angiogenesis comprising a active substance chosen from at least one of a nucleic acid molecule, a antisense nucleic acid molecule, a polypeptide or an antibody. The invention further comprises: an antisense nucleic acid sequence chosen from any of the sequences provided in the specification; preparation of the antibody comprising in vivo or in vitro immunisation of an immunocompetent animal cell, preferably of a vertebrate and most preferably of a mammal, with at least one of the polypeptide sequences chosen from a sequence provided in the specification; a mammalian expression vector comprising at least one antisense sequence chosen from the control of the polypeptide sequences and sequence chosen from the specification; a mammalian comprising at least one antisense sequence chosen from the specification of the polypeptide sequences appression vector comprising at least one antisense sequence chosen from the specification of the polypeptide sequences appression vector comprising the sequence chosen from the specification of the polypeptide sequences appression vector comprising the sequence sequence chosen from the specification of the polypeptide sequences chosen from the sequence chosen from the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene therapy; antisense gene therapy; tumour vascularisation; retinopathies; rheumatoid arthritis; Crohn's disease; atherosclerosis; ovarian hyperstimulation; psoriasis; endometriosis; restenosis; tissue granulation; peripheral vascular disorder; hypertension; vascular inflammation; Raynaud's disease; aneurism; arterial restenosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antiinflammatory, vasotropic, hypotensive, opthalmological, antipsoriatic, and cardiant. The novel nucleic acid molecules of the invention may be used to treat disorders in gene therapy and antisense gene therapy. The nucleic acid sequences, proteins and antibodies as pa of the therapeutic compositions are useful in treating a disorder of angiogenesis chosen from: tumour vascularisation, retinopathies, angiogenesis chosen from: tumour vascularisation, retinopathies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genetically modified cell, that over- or under-expresses a gene implicated in an angiogenic disorder, comprising inserting the vector from above into a mammalian cell; a genetically modified cell that over-expresses or under-expresses at least one gene involved in angiogenesis by a nucleic acid sequence chosen from any of ADP73049 to ADP7338, as the antisense nucleic acid selection of above, or a fragment of any of these; preparation of a cell line that stably expresses an expression vector. The angiogenesis inhibitor has the following activities:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADK60255 standard; DNA; 564 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 29

The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, Crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with nevvascularization, restenosis due to

Claim 4; SEQ ID NO 131; 424pp; French

Compositions for diagnosing, prognosing and treating angiogenic disorders including tumor vascularization and heart disease, comprise nucleic acid

Compositions containing nucleic acid or polypeptide differentially expressed in angiogenesis are useful to diagnose, prognose and treat angiogenic disorders including tumor vascularization and heart disease.

WPI; 2004-013911/02

polypeptide differentially expressed in angiogenesis.

유

angioplasty, overproduction of tissue due to cicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, myocardial infarction, chronic heart disease, cardiac congestion or macular degeneration due to age or osteoporosis. This sequence corresponds to an antisense DNA sequence to a differentially expressed DNA used in the composition of the invention.

```
invention may be used to treat disorders in gene therapy and antisense gene therapy. The nucleic acid sequences, proteins and antibodies as pariof the therapeutic compositions are useful in treating a disorder of angiogenesis chosen from: tumour vascularisation, retinopathies, rheumatoid arthritis, Crohn's disease, atherosclerosis, ovarian hyperstimulation, psoriasis, endometriosis associated with neovascularisation, restencesis due to balloon angioplasty, tissue granulation due to scarification, peripheral vascular disorders, hypertension, vascular inflammation, Raynaud's disease, aneurism, arterial restencess, thrombophlebitis, lymphadenopathy, lymphedema, ischaemia, angina, myocardial infarction, chronic heart disease, congestive heart disease, macular degeneration linked to age and osteoporosis. This polymucleotide represents a human antisense DNA region for the creation of an angiogensis inhibitor of the invention.

New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, osteoarthritis, obssity, atherosclerosis, cancer, Parkinson's မ္ပ infections for e.g. disease,

Claim 20; Page 100-101; 340pp; English

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The sequences are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular disorders (e.g. hypertension, atherosclerosis), neurodegenerative disorders (e.g. hypertension, atherosclerosis), previously, immune disorders, alzheimer's disease, Parkinson's disease), epilepsy, immune disorders, bind of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        osteoarthritis, haematopoietic disorders, inflammatory skin disorders, asthma and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, and in the generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, and in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. Sequences ACA10111-ACA10156 represent human NOVX polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          03-JUN-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO2003102155-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dyslipidaemia.

The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence encodes a NOVX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; NOVX; gene; ss; cardiomyopathy; atherosclerosis; hypertension; scleroderma; obesity; cancer; diabetes; haemophilia; graft-versus-host disease; AIDS; asthma; Crohn's disease; multiple sclerosis; infection; anorexia; cancer-associated cachexia; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease;

                                                                                                                                                                                                                          The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obseity, cancer, diabetes, haemophilia, graft-versus-host disease, AIDS, asthma, Crohn's disease, multiple sclerosis, infections, anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), haematopoietic disorders and wasting disorders. The polypucleotides are also used as hybridisation probes, in chromosome mapping and in tissue typing. The polypeptides are also useful as vaccines. This sequence represents a human NOVX polynucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 200

RESULT 12
ADC30192
CC ADC3089) and the polypeptides they encode (ADC3089) and the polypeptides they encode (ADC3089) and the polypeptides they encode (ADC3089) and the polypeptide of the invention additionally encompasses expression CC vectors and host cells comprising a nucleic acid of the invention; the cells comprising a nucleic acid of the invention; the cerombinant production of a polypeptide of the invention; and methods of polypeptides of the invention; and methods of cells comprising polypeptide of the invention; and methods of cells invention further discloses methods of peventing, treating or cempound which binds to a polypeptide of the invention. The cell invention further discloses methods of peventing, treating or campional antibodies for carrying out the methods of the invention; methods for the identification of compounds that modulate the cexpression or activity of the polypucleotide and/or polypeptide; and 767 cc contig sequences corresponding to the cDNA sequences of the invention (ADC31861-ADC3262) and the polypeptides encoded by the contigs (ADC32628 cc and 10 diagnostics, drug screening, forensics, gene mapping, in the constitution of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of consers and products dependent on DNA and amino acid sequences. They are considered the recember of the invention acid sequences. They are considered the polypeptides of the invention are consers. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tang

Covarian cancer cells as compared to their expression in normal (i.e. non-concerned) ovarian cells. The invention also relates to polypeptides concerous) ovarian cells. The invention also relates to polypeptides concoded by the markers, antibodies that selectively bind to the concoded by the markers, antibodies that selectively bind to the concoded by the markers, antibodies that selectively bind to the concoded by the markers, antibodies that selectively bind to the concoded of the patient at risk concoded of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the concoded of the patient an antisense oligonucleotide complementary to a marker of the convention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of the compression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed complex to a secreted protein or to a transcribed complex to a secreted protein or to a transcribed comparing the level of expression of the marker is secreted protein or to a transcribed complex to the

The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient which involves detecting expression of the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                         sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also use in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is

This sequence encodes a human thrombospondin protein, BTL.012. A of this protein, comprising a thrombospondin repeat domain, may to modulate angiogenesis at a site. The BTL.012 fragment may be diagnosing, preventing or treating a medical condition, particul

BTL.012. A main, may be us nt may be used , particularly

fragment be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 aupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8889

* NOTE: This is a 'working draft' sequence. It currently

* consists of 19 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

* NOTE: This is a 'working draft' sequence. It currently
consists of 21 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     26448 TCCCGTCACGCGCACTC 26464
